

TU Delft — Admission & Application

RAG-ready undergraduate admissions dataset | Academic year 2026–2027

Purpose

This is a clean, image-free, text-based dataset prepared for a Retrieval-Augmented Generation (RAG) learning project. It consolidates current TU Delft programme, admission, fee and date information into a single document for retrieval experiments.

Important: This is **not an official TU Delft prospectus**. It is a synthesized RAG dataset based on publicly available university and Dutch higher-education information. Applicants should verify current requirements, fees and deadlines on TU Delft before applying.

1. University overview

Delft University of Technology (TU Delft) is a technical university in Delft, Netherlands. Its Bachelor programmes include engineering, science, design and technology disciplines. The TU Delft Study Guide provides curriculum and course information starting from academic year 2025–2026.

2. English-taught Bachelor programmes

Programme	Duration	Language	Start	Application deadline
Aerospace Engineering	3 years	English	September	15 January (selection/numerus fixus)
Computer Science and Engineering	3 years	English	September	15 January (selection/numerus fixus)
Earth, Climate and Technology	3 years	English	September	1 April (standard deadline)
Nanobiology	3 years	English	September	1 April for international diploma applicants; 1 May for Dutch diploma applicants

3. Programme and eligibility information

Aerospace Engineering

The programme covers aerospace disciplines including aerodynamics, flight mechanics, satellite orbits, materials and aerospace systems. The programme is a three-year Bachelor programme and is taught in English.

Academic eligibility: A Dutch VWO diploma including Mathematics B and Physics, or an equivalent international secondary qualification with the required subjects, assessed by TU Delft. The programme has a selection procedure/numerus fixus.

English: IELTS Academic 6.5 overall or TOEFL iBT 90 is reported for the programme; accepted Cambridge qualifications may also be used.

Computer Science and Engineering

The programme covers software development, algorithms, data processing, artificial intelligence, computer graphics, data mining, image processing, programming languages, data structures, software quality and complex systems.

Academic eligibility: A Dutch VWO/Gymnasium diploma including Mathematics B, or an equivalent international secondary qualification with the required mathematics background. The programme uses a

selection/numerus-fixus procedure.

English: IELTS Academic 6.5 overall or TOEFL iBT 90 is reported for the programme; accepted Cambridge qualifications may also be used.

Earth, Climate and Technology

This Bachelor programme is focused on Earth and environmental sciences and technology. It is the current programme associated with the former Applied Earth Sciences naming.

Academic eligibility: A Dutch VWO/Gymnasium diploma including Mathematics B, Physics and Chemistry, or an equivalent international secondary qualification with those subjects. The programme is not numerus fixus according to the current programme information used for this dataset.

English: IELTS Academic 6.5 overall or TOEFL iBT 90 is reported for the programme; accepted Cambridge qualifications may also be used.

Nanobiology

Nanobiology is a joint Bachelor programme involving TU Delft and Erasmus University Rotterdam. It combines biology, mathematics, physics and technology.

Academic eligibility: The programme requires an appropriate VWO/international secondary qualification with relevant mathematics, physics, chemistry and biology preparation. Programme-specific requirements should be checked with TU Delft.

Application: For applicants with an international diploma, the current programme information used here gives 1 April as the application deadline; for applicants with a Dutch diploma, 1 May is indicated. Matching is mandatory and the programme is not numerus fixus in the current listing.

4. Tuition fees

For the 2026–2027 academic year, the statutory tuition fee in the Netherlands is €2,694 per year. This applies to eligible students who qualify for the statutory rate. Students who do not qualify may be charged an institutional tuition fee.

Fee category	2026–2027 amount	Notes
Statutory tuition fee	€2,694 / year	Applicable to students who meet the statutory-fee conditions.
TU Delft institutional Bachelor rate	€19,906 / year	Reported 2026–2027 rate for non-EU/EEA students in the four English-taught Bachelor programmes; verify directly with TU Delft before use.

5. Important application dates

15 January: Important deadline for TU Delft Bachelor programmes using selection/numerus-fixus procedures, including Aerospace Engineering and Computer Science and Engineering in the current dataset.

1 April: Standard deadline shown for non-numerus-fixus Bachelor programmes such as Earth, Climate and Technology; it is also the international-diploma deadline used here for Nanobiology.

1 May: Current programme information used here indicates this deadline for Dutch-diploma applicants to Nanobiology.

1 September: Typical Bachelor programme start month. Individual programme pages should be checked for the exact academic-year start date.

6. Example RAG questions

- What is the application deadline for TU Delft Aerospace Engineering?
- What are the Mathematics requirements for Computer Science and Engineering?
- How much is the statutory tuition fee for 2026–2027?
- What is the reported institutional tuition fee for non-EU/EEA Bachelor students?
- Which TU Delft Bachelor programmes in this document are taught in English?
- What subjects are required for Earth, Climate and Technology?
- What is the application deadline for Nanobiology for an international diploma?
- How long is the TU Delft Computer Science and Engineering Bachelor?

7. Source notes

Primary/official sources used include TU Delft Study Guide and TU Delft OpenCourseWare programme information. Current fee and programme/deadline cross-checks were also made against Dutch higher-education information sources where the TU Delft admissions page was not directly retrievable. This distinction is intentional so the RAG dataset does not present synthesized information as an official prospectus.
